DynamicalSystems.jl: Open-sourced software library for the exploration of chaos and nonlinear dynamics

DynamicalSystems.jl is a software library with an intuitive interface. It can compute quantities like Lyapunov spectra, attractor dimensions, perform delay coordinate embeddings and more. The library is well-documented, gives references to scientific papers and has clear source code.

This workshop will be an overview of what you can do with the library, how to use it, as well as some little extras for the "advanced users" towards the end.
