# More than the sum: chromatin enzymes and their role in supramolecular genome regulation

Max-Planck-Institut für Multidisziplinäre Naturwissenschaften (MPI-NAT, Faßberg-Campus)

---

Dr. Eustermann research is focused on the development and application of cryo-EM methods to explore the molecular landscape of chromatin in order to understand the principles underlying expression and maintenance of genomic information in eukaryotes at an atomic level. You can find the abstract for his talk attached.
